acid serine the 3' acceptance site reads on the (+) strand as GCCTTAAGGGC (SEQ ID NO:31).

## Amendments to claims:

- 1. (Amended) A humanized polynucleotide vector comprising:
  a human derived promoter or mammalian homolog thereof, either one of
  which is functional in a target tissue or target cells, said promoter operably linked to a
  sequence acceptance site, which directionally accepts cDNA [target products] derived
  from rtPCR cloning via unique sites within an interrupted palindrome recognition
  sequence for a restriction endonuclease, said vector lacking nucleic acid sequences
  encoding vector-derived polypeptides, wherein[,] said vector lacks an antibiotic resistance
  encoding nucleic acid sequence.
- 6. (Amended) The humanized polynucleotide vector according to claim[s] 4 or 5 wherein the portion corresponds to a region spanning the NCO site through the KpnI site of the genomic RANTES promoter.
- 12. (Twice Amended) A polynucleotide vector according to claim 1 <u>in which</u> the [wherein a 5'] sequence acceptance site [reads on the positive strand as] <u>is a 5'</u> sequence site having the nucleotide sequence GCCACCATGGCC <u>on the positive strand</u>.
- 15. (Twice Amended) A polynucleotide vector according to claim 1 further comprising cDNA [target products] <u>derived from rtPCR cloning</u>, and an optional internal ribosomal entry site, said cDNA [target products] integrated into said sequence acceptance site, said cDNA [target products] comprising a nucleotide sequence encoding at least one target antigen or antigenic epitope thereof alone or in combination with a nucleotide sequence encoding a cytokine or chemokine.
- 16. (Twice Amended) A [polynucleotide vector vaccine] <u>composition for inducing an immune response against at least one target antigen or antigenic epitope</u> comprising <u>a vector comprising</u> a human derived promoter or mammalian homolog thereof, <u>either one of</u> which is functional in a mammalian target tissue or mammalian target cell, said promoter operably linked to a sequence acceptance site, which directionally accept[ance]s cDNA [target products] <u>derived</u> from rtPCR cloning via unique sites within an interrupted palindrome recognition sequence for a restriction

endonuclease, an optional internal ribosomal entry site, and cDNA [target products] derived from said rtPCR cloning, said cDNA [target products] integrated into said sequence acceptance site, said cDNA [target products] comprising a nucleotide sequence encoding at least one target antigen or antigenic epitope thereof, wherein said vector induces an immune response to said antigen or antigenic epitope thereof, and said vector lacking nucleic acid sequences encoding vector-derived polypeptides, wherein[,] said vector lacks an antibiotic resistance encoding nucleic acid sequence.

- 17. (Twice Amended) A [polynucleotide vector vaccine] <u>composition for inducing an immune response</u> according to claim 16 wherein the target antigen is a product of a tumor associated genetic derangement.
- 18. (Twice Amended) A [polynucleotide vector vaccine] <u>composition for inducing an immune response</u> according to claim 16 wherein the target antigen is a tumor antigen, bacterial antigen, viral antigen, or parasitic antigen.
- 19. (Twice Amended) The [polynucleotide vector vaccine] <u>composition for inducing an immune response</u> according to claim 16, wherein the tumor antigen is p53, RB, ras, int-2, Hst, Tre17, BRCA-1, BRCA-2, MUC-1, HER-2/neu, truncated EGFRvIII, CEA, MyC, Myb, OB-1, OB-2, BCR/ABL, GIP, GSP, RET, ROS, FIS, SRC, TRC, WT1, DCC, NF1, FAP, MEN-1, ERB-B1 <u>and</u> combinations thereof.
- 20. (Twice Amended) A [polynucleotide vector vaccine] <u>composition for inducing an immune response</u> according to claim 16 further comprising an additional cDNA[target product] <u>derived from rtPCR</u>, comprising a nucleic acid sequence encoding a cytokine or chemokine.
- 21. (Twice Amended) A [polynucleotide vector vaccine] composition for inducing an immune response according to claim 20 wherein the cytokine is selected from the group consisting of interleukin 2, interleukin 3, interleukin 4, interleukin 7, interleukin 8, interleukin 12, interleukin 15, GM-CSF, tumor necrosis factor, and interferon.
- 22. (Twice Amended) A [polynucleotide vector vaccine] <u>composition for inducing an immune response</u> according to claim 20 wherein the chemokine is selected

from the group consisting of RANTES, MCP, MIP-E $\alpha$ , MIP-1 $\beta$ , defensins, IP-10 and combinations thereof.

23. (Twice Amended) A method for expressing at least one target antigen or antigenic epitope thereof in cells comprising:

introducing a humanized polynucleotide vector into said cells, under conditions for expression of the target antigen or antigenic epitope thereof, said vector comprising:

a human derived promoter or mammalian homolog thereof, which is functional in said cells, said promoter operably linked to a sequence acceptance site which directionally accepts cDNA [target products] <u>derived</u> from rtPCR cloning via unique sites within an interrupted palindrome recognition sequence for a restriction endonuclease and,

cDNA [target products] <u>derived from rtPCR</u>, and an optional internal ribosomal entry site, said cDNA [target products] integrated into said sequence acceptance site, said cDNA [target products] comprising a nucleic acid sequence encoding at least one target antigen or antigenic epitope thereof, and said vector lacking nucleic acid sequences encoding vector-derived polypeptides, wherein said vector lacks an antibiotic resistance encoding nucleic acid sequence.

- 25. (Twice Amended) The method of claim 23 wherein the target antigen is a tumor antigen, bacterial antigen, viral antigen, or parasitic antigen.
- 27. (Twice Amended) A [pharmaceutical] composition comprising at least one polynucleotide vector according to claims 1, 2, 4, 5, 7 or 8-12 and a pharmaceutically acceptable carrier.
- 28. (Twice Amended) A [pharmaceutical] composition comprising [the polynucleotide vector vaccine] a composition for inducing an immune response according to claims 16-21 or 22 and a pharmaceutically acceptable carrier.
- 30. (Twice Amended) A kit comprising the [polynucleotide vector vaccine] composition according to claims 16-21 or 22.
- [34. A host cell comprising: the polynucleotide vector of claim 16-21 or 22, wherein the host cell is capable of expressing the target antigen or antigenic epitope.]

- [35. The host cell according to claim 34 wherein the host cell is a myocyte or professional antigen presenting cell.]
- 36. (Twice Amended) A method of stimulating a specific immune response to at least one target antigen or antigenic epitope thereof in a mammal comprising: administration of an effective amount of a [polynucleotide vector vaccine] composition according to claims 16-21 or 22 into the mammal, said amount elicits the specific immune response to the target antigen or epitope thereof.
- 38. (Twice Amended) The method according to claim 36 further comprising administration of <u>an</u> effective amount of an expression enhancing agent prior to administration of [the polynucleotide vector vaccine] <u>said composition</u>.
- 42. (Twice Amended) The method according to claim 41 wherein the tumor antigen is selected from the group consisting of [P53,] p53, RB, ras, int-2, Hst, Tre 17, BRCA-1, BRCA-2, MUC-1, HER-2/neu, truncated EGFRvIII, CEA, MyC, Myb, OB-1, OB-2, BCR/ABL, GIP, GSP, RET, ROS, FIS, SRC, TRC, WT1, DCC, NF1, FAB, MEN-1, ERB-B1 and combinations thereof.
- 44. (Twice Amended) A method of making a humanized polynucleotide vector comprising:

operably linking a human derived promoter or mammalian homolog thereof, either of which is functional in a target tissue or target cells, to a sequence acceptance site, said site directionally accepts cDNA [target products] derived from rtPCR cloning via unique sites within an interrupted palindrome recognition sequence for a restriction endonuclease, said vector lacking nucleic acid sequences encoding a vector-derived polypeptide, wherein[,] said vector lacks an antibiotic resistance encoding nucleic acid [sequence] sequence.

- [45. The method according to claim 44 wherein the method generates antigen specific cytotoxic lymphocytes to the tumor antigen or antigenic epitopes thereof.]
- [46. A isolate antibody comprising an antibody elicited in response to immunization with the polynucleotide vector vaccine according to claim 16-2 1 or 22,

said antibody is specific for the target antigen or antigenic epitope thereof expressed by the mammalian target tissue or mammalian target cell.]

- [47. The sequence acceptance site comprising nucleic acid sequences which accept cDNA target products from rtPCR cloning wherein the sequence acceptance site directionally accepts target sequence specific products from rtPCR cloning via unique sites within an interrupted palindrome recognition sequence for a restriction endonuclease.]
- [48. The sequence acceptance site according to claim 47 wherein the restriction endonuclease is Bgl I.]
- [49. The sequence acceptance site according to claim 47 or 48 wherein a 5' acceptance site reads on the positive strand as GCCACCATGGCC.]
- [50. The sequence acceptance site according to claim 49 wherein a 3' acceptance site reads on the positive strand as GCCTTAAGGGC.]
- [51. The sequence acceptance site according to claim 47 wherein the site comprises the nucleotide sequence as depicted in Figure 2.]
  - 66. A humanized polynucleotide vector comprising:

a human derived promoter or mammalian homolog thereof chosen from the group consisting essentially of a human derived RANTES promoter, a truncated RANTES promoter of 249 base pairs, a truncated RANTES promoter of 440 base pairs, a truncated RANTES promoter of 900 base pairs or a truncated RANTES promoter as described in GenBank Accession No. S64885, which is functional in a target tissue or target cells, said promoter operably linked to a sequence acceptance site which directionally accepts cDNA derived from rtPCR cloning via unique sites within an interrupted palindrome recognition sequence for a restriction endonuclease, said vector lacking nucleic acid sequences encoding vector-derived polypeptides wherein, said vector lacks an antibiotic resistance encoding nucleic acid sequence.

for selection of recombinant plasmids.

- 70. The humanized polynucleotide vector according to claim 69 wherein the origin for replication is colE1 or functional portion thereof.
- 71. The humanized polynucleotide vector according to claim 69 wherein the origin for replication comprises a 635 base pair region of the colE1 origin of replication.
- 72. The humanized polynucleotide vector according to claim 66 further comprising a human-derived 3' splice sequence and a human-derived poly A sequence, both sequences located downstream of the sequence acceptance site.
- 73. The humanized polynucleotide vector according to claim 72 wherein the human derived 3' splice and poly A sequence are derived from human growth hormone.
- 74. A polynucleotide vector according to claim 66 wherein a 5' sequence acceptance site reads on the positive strand as GCCACCATGGCC.
- 75. A polynucleotide vector comprising SEQ ID No 16, SEQ ID No 27 or SEQ ID No 28.
- 76. A polynucleotide vector contained within a host cell deposited with the ATCC designation 98400 or ATCC designation 98401.
- 77. A polynucleotide vector according to claim 66 further comprising cDNA derived from rtPCR cloning, and an optional internal ribosomal entry site, said cDNA integrated into said sequence acceptance site, said cDNA comprising a nucleotide

In re Appln. of Nelson et al. Application No. 09/242,202

sequence encoding at least one target antigen or antigenic epitope thereof alone or in combination with a nucleotide sequence encoding a cytokine or chemokine.

- A composition for inducing an immune response against at least one target antigen or antigenic epitope comprising a vector comprising a human derived promoter or mammalian homolog thereof chosen from the group consisting essentially of a human derived RANTES promoter, a truncated RANTES promoter, a truncated RANTES promoter of 249 base pairs, a truncated RANTES promoter of 440 base pairs, a truncated RANTES promoter of 900 base pairs or a truncated RANTES promoter as described in GenBank Accession No. S64885, which is functional in a mammalian target tissue or mammalian target cell, said promoter operably linked to a sequence acceptance site which directionally accepts cDNA derived from rtPCR cloning via unique sites within an interrupted palindrome recognition sequence for a restriction endonuclease, an optional internal ribosomal entry site, and cDNA derived from said rtPCR cloning, said cDNA integrated into said sequence acceptance site, said cDNA comprising a nucleotide sequence encoding at least one target antigen or antigenic epitope thereof, wherein said vector induces an immune response to said antigen or antigenic epitope thereof, and said vector lacking nucleic acid sequences encoding vector-derived polypeptides wherein, said vector lacks an antibiotic resistance encoding nucleic acid sequence.
- 79. A composition for inducing an immune response according to claim 78 wherein the target antigen is a product of a tumor associated genetic derangement.
- 80. A composition for inducing an immune response according to claim 78 wherein the target antigen is a tumor antigen, bacterial antigen, viral antigen, or parasitic antigen.
- 81. A composition for inducing an immune response according to claim 78, wherein the tumor antigen is p53, RB, ras, int-2, Hst, Tre17, BRCA-1, BRCA-2, MUC-1, HER-2/neu, truncated EGFRvIII, CEA, MyC, Myb, OB-1, OB-2, BCR/ABL, GIP, GSP, RET, ROS, FIS, SRC, TRC, WT1, DCC, NF1, FAP, MEN-1, ERB-B1 and combinations thereof.

A composition for inducing an immune response according to claim 78 further comprising an additional cDNA derived from rtPCR, comprising a nucleic acid sequence encoding a cytokine or chemokine. 83. A composition for inducing an immune response according to claim 82 wherein the cytokine is selected from the group consisting of interleukin 2, interleukin 3. interleukin 4, interleukin 7, interleukin 8, interleukin 12, interleukin 15, GM-CSF, tumor necrosis factor, interferon. 84. A composition for inducing an immune response according to claim 82 wherein the chemokine is selected from the group consisting of RANTES, MCP, MIP- $E\alpha$ , MIP-1 $\beta$ , defensins, IP-10 and combinations thereof. 85. A method for expressing at least one target antigen or antigenic epitope thereof in cells comprising: introducing a humanized polynucleotide vector into said cells, under conditions for expression of the target antigen or antigenic epitope thereof, said vector comprising: a human derived promoter or mammalian homolog thereof chosen from the group consisting essentially of a human derived RANTES promoter, a truncated RANTES promoter, a truncated RANTES promoter of 249 base pairs, a truncated RANTES promoter of 440 base pairs, a truncated RANTES promoter of 900 base pairs or a truncated RANTES promoter as described in GenBank Accession No. S64885, which is functional in said cells, said promoter operably linked to a sequence acceptance site which directionally accepts cDNA derived from rtPCR cloning via unique sites within an interrupted palindrome recognition sequence for a restriction endonuclease and, cDNA derived from rtPCR, and an optional internal ribosomal entry site, said cDNA integrated into said sequence acceptance site, said cDNA comprising a nucleic acid sequence encoding at least one target antigen or antigenic epitope thereof, and said vector lacking nucleic acid sequences encoding vector-derived polypeptides, wherein said vector lacks an antibiotic resistance encoding nucleic acid sequence. The method of claim 85 wherein the cells are selected from the group consisting of myocytes and professional antigen presenting cells.

In re Appln. of Nelson et al. Application No. 09/242,202

The method according to claim 96 further comprising administration of effective amount of an expression enhancing agent prior to administration of said composition. 99. The method according to claim 98 wherein the expression enhancing agent is a mycotoxic agent. 100. The method according to claim 99 wherein the mycotoxic agent is bupivacaine-HCl or dextrose. The method according to claims 96-100 wherein the target antigen is a tumor antigen, bacterial antigen, viral antigen or parasitic antigen. 102. The method according to claim 101 wherein the tumor antigen is selected from the group consisting of p53, RB, ras, int-2, Hst, Tre 17, BRCA-1, BRCA-2, MUC-1. HER-2/neu, truncated EGFRvIII, CEA, MyC, Myb, OB-1, OB-2, BCR/ABL, GIP, GSP, RET, ROS, FIS, SRC, TRC, WT1, DCC, NF1, FAB, MEN-1, ERB-B1 and combinations thereof. 103. The method according to claim 102 wherein the method generates antigen specific cytotoxic lymphocytes to the tumor antigen or antigenic epitopes thereof. 104. A method of making a humanized polynucleotide vector comprising: operably linking a human derived promoter or mammalian homolog thereof chosen from the group consisting essentially of a human derived RANTES promoter, a truncated RANTES promoter, a truncated RANTES promoter of 249 base pairs, a truncated RANTES promoter of 440 base pairs, a truncated RANTES promoter of 900 base pairs or a truncated RANTES promoter as described in GenBank Accession No. S64885, which is functional in a target tissue or target cells to a sequence acceptance site, said site directionally accepts cDNA derived from rtPCR cloning via unique sites within an interrupted palindrome recognition sequence for a restriction endonuclease, said vector lacking nucleic acid sequences encoding a vector-derived polypeptide wherein, said vector lacks an antibiotic resistance encoding nucleic acid sequence.

105. The humanized polynucleotide vector according to claims 66,67 or 69-77.

A11

wherein the recognition sequence is recognized by Bg1I restriction endonuclease.

- 106. The humanized polynucleotide vector according to claim 69, wherein the nucleic acid sequence which allows for selection is a suppressor tRNA gene, a synthetic SupF complementation tRNA gene, or functional derivatives thereof.
- 107. The humanized polynucleotide vector according to claim 106, wherein the nucleic acid sequence is selected from the group consisting of SupE, SupP, SupD, SupU, SupF, SupZ, glyT, glyU, SerP, psul<sup>+</sup>, psu2<sup>+</sup>-C34, psu3<sup>+</sup>AM and psu3<sup>-</sup>OC.
- 108. A polynucleotide vector according to claims 66, 67 or 69-73, wherein the sequence site is a 3' sequence site having the nucleotide sequence GCCTTAAGGC on the positive strand.
- 109. The humanized polynucleotide vector according to claims 66, 67 or 69-73, wherein the sequence acceptance site comprises the nucleotide sequence as depicted in Figure 2.
- 110. The method according to any of claims 85-88 wherein the method is ex vivo.

Amendments to Abstract:

## **ABSTRACT**

The invention is a "humanized" polynucleotide vector, which has the necessary elements to express mRNA for a target antigen. The resultant translated polypeptides are available for processing into presentable antigens to the immune system. The vector accommodates monomorphic and polymorphic nucleic acid sequences of a target antigen or antigens.
